

Your New Cash Cow ... OILMASTER™

SAVE 50%

or more

The OilMaster™ Bull was pitted against standard clay-based, kitty-litter type absorbents in an independent study. The bull won.*

COST: OilMaster costs less to pick up the same amount. An independent test panel determined it cost 13 cents to clean up an 8-oz. spill, versus 48 cents for popular clay-based absorbent.

EFFICIENCY: 7x more efficient for most spills.

SAFETY: Soak it up, sweep it up. What's left is an organic fertilizer you can use in your landscaping. Few, if any, airborne particles. Non-slip, and will not cling or track on shoes.

STORAGE: OilMaster's 20 lb. bag does the job of 140 lbs. of clay-based absorbents. Much easier.

PEDIGREE: OilMaster was invented in a science lab by Cornell University scientists.

COST: Costs 70% more to do the job.

EFFICIENCY: Can't compete with OilMaster.

SAFETY: Not very. Messy, sticks to shoes and tracks onto carpets or other areas. Airborne particles may cause cancer.

STORAGE: How much space you got? Heavy. Messy. Requires extra space, so you pay twice.

PEDIGREE: Developed by people trying to clean up cat urine.

There you have it... Men in Lab Coats 6, People with Sponges, Mops and Air Freshener 0.
